Salmon Run FAQ: Although we do our best to be accurate and complete, there are always more questions - Q: What about Logging Programs?A: WriteLog has prepared a revision to the Salmon Run module covering rule changes for 2009 (tnx Steve, K7AWB) - Q: Since you recognize three Modes (CW, Digital, and Phone), what is "Mixed"?A: Mixed is more than one Mode, and we require at least 10 QSOs on each Mode submitted for a Mixed entry. Example:100 CW QSOs plus 10 Digital QSOs, or 100 Phone plus 10 CW and 10 Digital, etc. Q: Why does the "Suggested Frequencies" list show 1850 for CW and Phone on 160 meters?A: Our mistake - suggested CW frequency is 1825 (below the DX Window) Q: On 6 meters the "Suggested Frequency" is 50.130 and we suggest Mobiles operate 5 kHz below, but 50.125 is the Calling Frequency.A: We suggest that on 6 meters all Salmon Run activity be above the Calling Frequency, starting at 50.130. We will add to this list as more Questions come in.
